

Condor

Are your operations 100% efficient? – Make the process even better in your medical daily routine: with process-optimised surgery. For additional **satisfaction, success** and **quality**. We can give you the support you need. Since the end of the '90s, Condor has supplied products of the highest precision 'made in Germany'. Developed, constructed and produced at a premium standard.

The story of our company began with the idea of creating a Surgical Retractor System which would be ideal for supporting surgeons during operations. This idea proved to be a massive success; today, Condor is an internationally acting company with an outstanding reputation in the medical world. There are over 2000 Condor systems in operation every day. Our instruments are especially prized for their reliability, quality and intuitive handling abilities. The name Condor represents **innovations, process optimisation** and **practical relevance**.

We continue to build on our experience; just like the Surgical Retractor System before it, we developed the RotexTable in close collaboration with experienced surgeons. The end result is a cutting-edge product that is **quick, intuitively usable**, and **absolutely exact**. This enables us to keep our fingers on the pulse and continually meet our customers demands. We are always happy to listen to your suggestions and questions.

SAFETY-PROCEDURE-SERVICE-OPTIMISED

„Condor is a family company where you can always expect a committed approach and quality, made in Germany. Both customers and staff have remained with us for many years, and we continue to develop new innovations.“

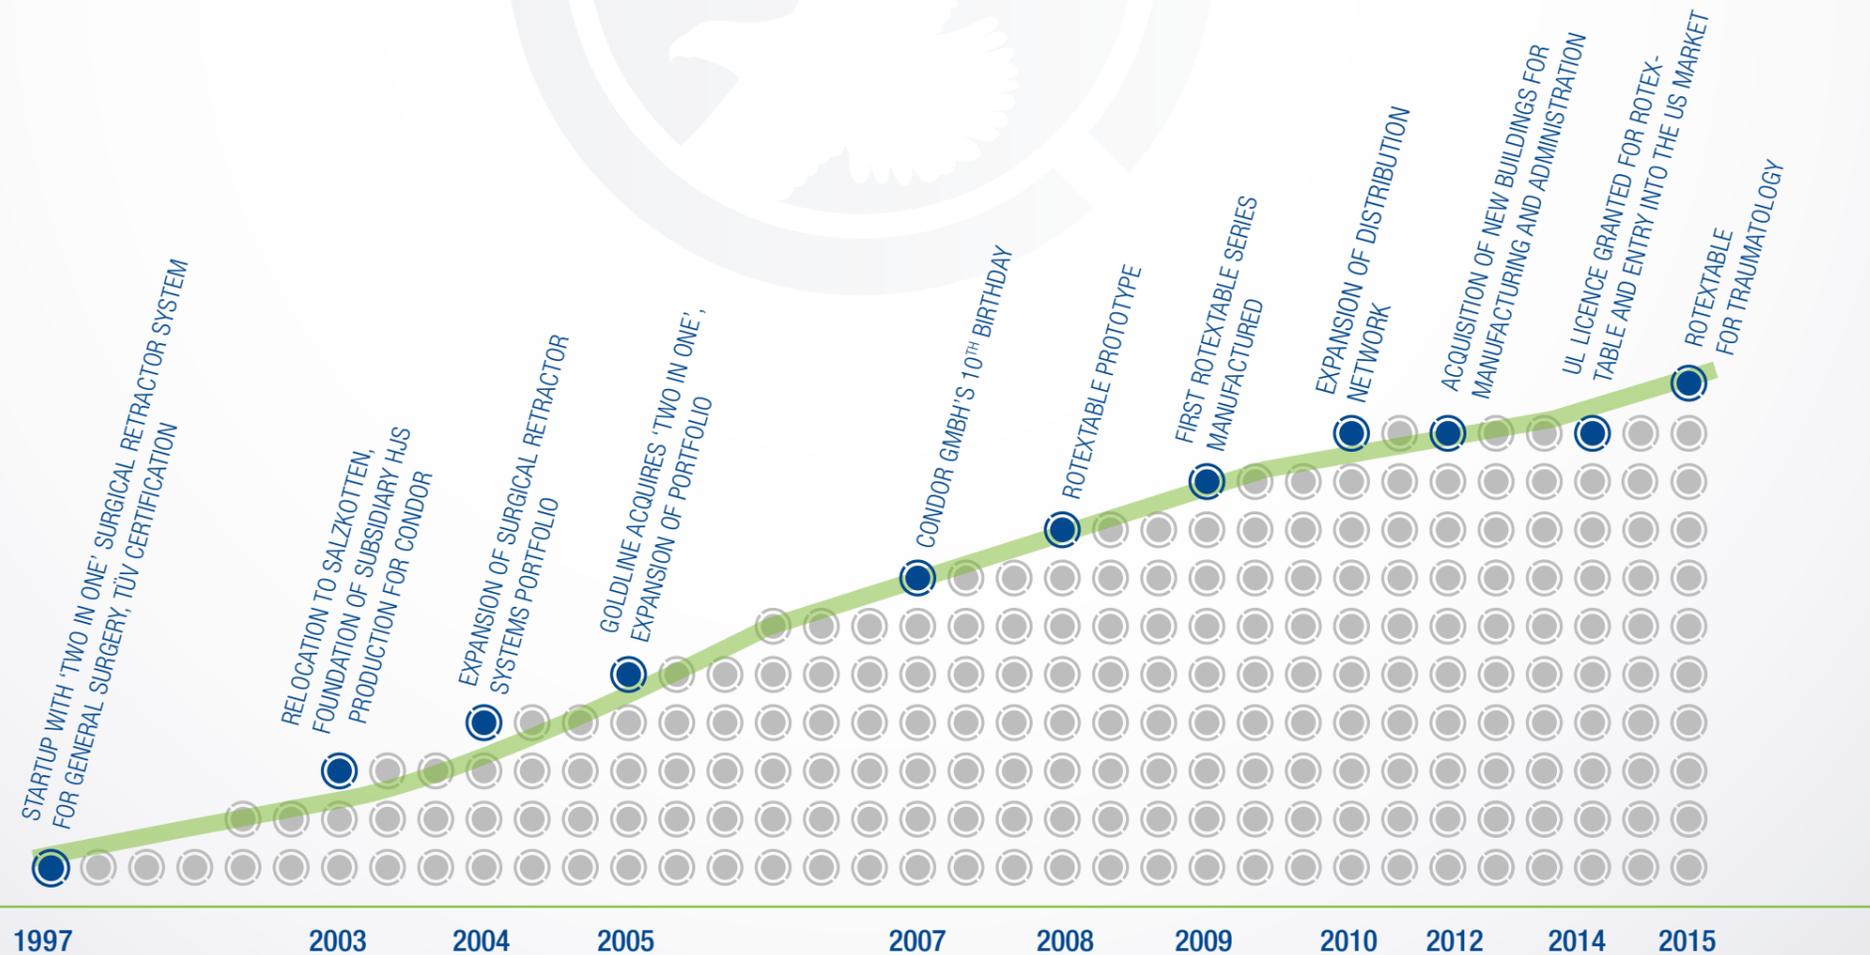

*Hermann-Josef Schulte
Founder and Managing Director*

INNOVATIONS-PROCESS-PRACTICE-OPTIMISED

„In Condor tradition, I am continuing our family company with my father. We also hope that you will continue to be impressed by the quality and services of our premium products. Together we can meet the challenges presented by the running of a modern-day hospital. We see ourselves as a provider of innovations: we can optimise your processes and their security with our products – so that you can **achieve more**.“

*Dominik Schulte, M.A.
Managing Director*

The RotexTable

ENDOPROSTHETICS-ARTHROSCOPY-TRAUMATOLOGY-
OPTIMISED

The RotexTable is the first electrically operated positioning device for hip endoprosthesis, hip arthroscopic and trauma surgery. With the RotexTable, we have developed a system which enables surgeons in the orthopedic field to independently adjust the position of the leg for the first time. The RotexShoe, which is compatible with the RotexTable, is the world's first firmly fixable surgical support and stability device for the foot. And naturally, these products bear the same characteristics as others from the house of Condor: quality "made in Germany".

HEIGHT ADJUSTMENT-
SAFETY-
SERVICE-
OPTIMISED

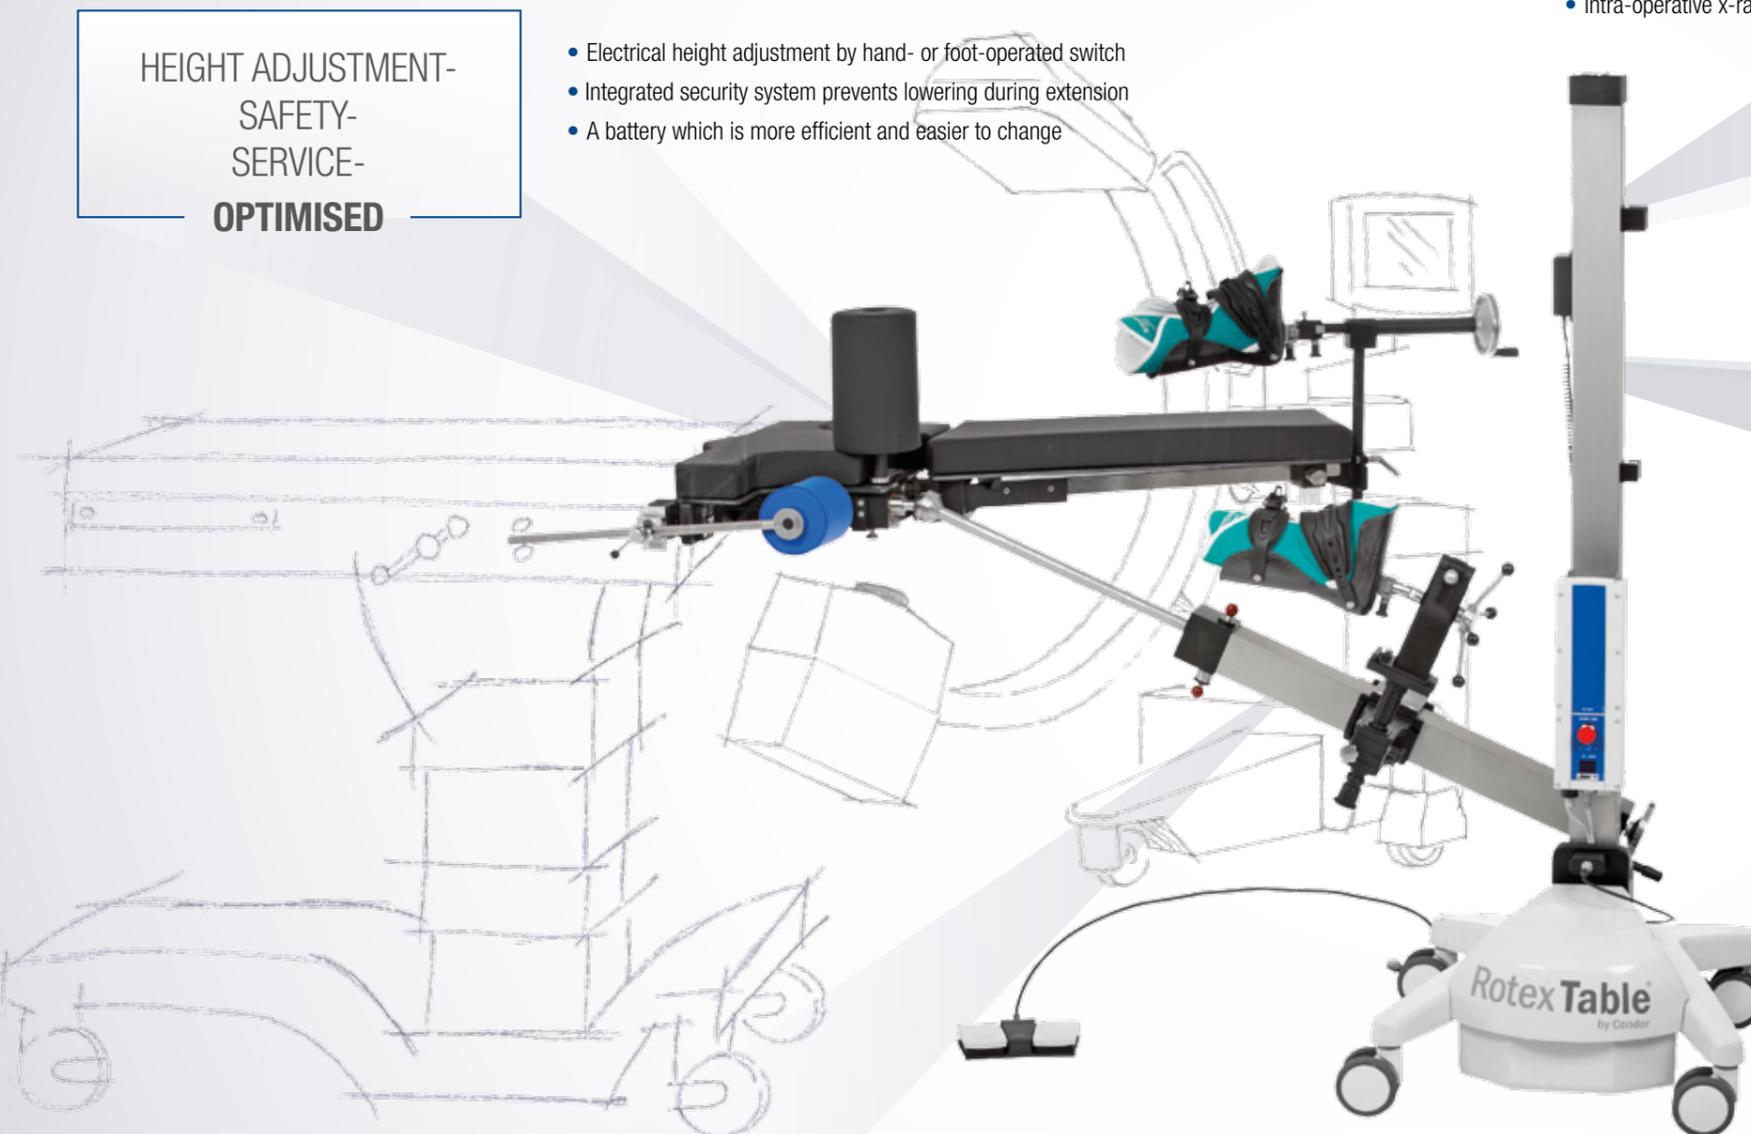

- Electrical height adjustment by hand- or foot-operated switch
- Integrated security system prevents lowering during extension
- A battery which is more efficient and easier to change

- Leg position adjustment, easy to handle, can be assembled in ≤ 2 minutes
- Quick, precise work with increased cost efficiency
- Intra-operative x-ray monitoring without blocking view

HANDLING-
PROCESS-
X-RAYS-
OPTIMISED

- Non-binding trial products
- On-site training, as well as guaranteed availability for further queries
- Service and maintenance by authorised specialists

EFFICIENCY-
MAINTENANCE-
SERVICE-
OPTIMISED

ADAPTABILITY-
STABILITY-
SPACE-
OPTIMISED

- Can be used with all common operating tables
- All essential leg positions can be adjusted by the surgeon during operation, and will remain completely stable
- Minimal storage space of only 90 cm²

THE KEY FACTS AT A GLANCE

≤ 2 min to assemble

-50% material costs

-1 member of surgical staff

Rotates in 5 steps

90 cm² minimal storage space surface

Quality as a brand

Medical precision instruments of highest quality – that is what Condor products stand for. Whether Surgical Retractor Systems GoldLine, RotexTable or RotexShoe – all apply to be the ideal support for surgeons and OR staff around the globe. They create more flexibility, mobility and an ideal process flow during operations. At the same time they have a share in reducing costs and deploying OR staff efficiently.

EXTENSION- X-RAYS- ATTACHMENT- OPTIMISED

- Extension system (ES) for existing universal operating tables, also available in carbon fibre version
- Cost efficient, quicker and safer reconstruction
- Optimal positioning for the patient
- Removable segment plates for optimal X-ray imaging

- Disposable inner shoe offers the best possible hygiene for the patient
- Stable, firmly fixable shoe with carbon outer form and anatomically fitted inner shoe
- Quick and precise fixing with quick-release fasteners prevents risk of injury to the patient

HYGIENE- FITTING- SAFETY- OPTIMISED

For us, customers are more than just buyers

We would never have been able to surpass previous standards without the collaboration of experienced surgeons in the development of the RotexTable. This development of a product with optimised functioning capabilities is still ongoing. We are always open to suggestions for different processes and new equipment, and test these with regards to the possibility of integration. A parallel can be drawn with the product's journey from Salzkotten into the great wide world, and adjustments that may be made by international users to fit different processes and specialities.

„ASSEMBLY-SAFETY-EFFICIENCY-OPTIMISED“

The RotexTable is the only ergonomic positioning device in the world created specially for the minimally invasive implantation of artificial hip joints with direct anterior approach, as well as open and arthroscopic treatment of hip joint conditions. With this invention, for the first time, I can move the patient's leg into all essential positions by myself during a routine hip implantation, and I receive feedback on tissue tension at the same time. The risk of fracture has been minimised, and intra-operative dislocation tests can be carried out.

I can see for myself every day just how much the use of the device has optimised our surgical procedures.

We have discovered that we can deploy our staff considerably more efficiently. As fewer medical staff are tied to the operating theatre, we are much more flexible today than we were before.

*Dr. Andreas Ottersbach,
Chief Physician and Head of
Orthopedics Clinic in Wallis Hospital,
Brig, Switzerland*
